DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-25 are rejected under 35 U.S.C. 103(a) as being unpatentable over Davies, WO 95/21795 in view of Hough, U.S. Patent 6,110,353.

Davies discloses the claimed method and apparatus for the oxygenating ground water comprising a length of tubing having inlet and outlet, a plurality of electrodes within said tubular wall, said electrodes having a spacing between

adjacent ones, means for applying electric potential across pairs of said electrodes and across said spacing, a pump for moving water through said tubing (see figure 5). The reference further discloses the use of a filter before the entering of the electrolytic cell (see figure 5). The reference does disclose the upwardly moving water (see figure 6).

The reference does not disclose the use of parallel plates, rather it uses concentric electrodes (see figure 1-4). The Hough patent is cited to show the use a parallel electrodes (see figures 3-4). Therefore, the invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the disclosure of the Davies in view of the teachings of the Hough patent, because the Hough patent teaches the use of the parallel plate electrodes provides the oxygenated water.

The reference further does not disclose the placement of the cell in a well in the ground, however, the reference does disclose the insitu treatment of the groundwater.

Consequently, the invention as a whole would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the

disclosure of the Davies reference, because the patent teaches the use of the cell insitu.

Allowable Subject Matter

Claims 7-12, 14-18, 21 and 25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter: none of the references of record disclose the use of pump having an inverted funnel having a frustoconical portion as claimed. Another embodiment recites the first and second end members abutting the plurality of plates.

Conclusion

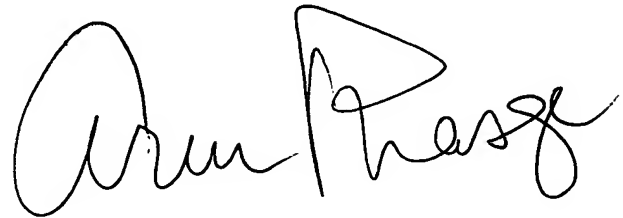

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun S. Phasge whose telephone number is (703) 308-2528. The examiner can normally be reached on MONDAY-THURSDAY, 7:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Nam X Nguyen can be reached on (703) 308-3322. The fax
